Portable Unit

The Unicorn is suitable for any indoor location

Weighs only 35 lbs. and can be placed anywhere with a power supply

How does it do it?

All-in-One Solution

Fully integrated system all in one box

Easy Installation

Plug and play

High Resolution

Applications designed specifically for children with developmental delays

Interactive Children Applications

We have **70+ different applications** available for you to choose from. All effects and elements can be customized such as: background image, audio, text, etc. The system comes with everything needed to **transform any floor/wall into a giant interactive activity**

What do users think?

“The kids absolutely love playing with this interactive floor game. You will often find children that do not know each other playing together – kicking the soccer ball or jumping on the mole. It has help distract some of our littlest patients while waiting to the doctor. I also love that at certain times it can simply display our hospital logo”

- Rachel Neubauer, RN, Pediatric Emergency Manager | Children's Hospital of Nevada at UMC

“It is soooo much fun!!!”

- Ava, 5yrs | Jimena, 9yrs | Samirah, 7 yrs

“I like stepping on the naughty chicken”

- Martin, 6yrs
